Biol. 7:233-239(1998).
-!- CATALYTIC ACTIVITY: Hydrolysis of the 1,4-beta-linkages of N-
acetyl-D-glucosamine polymers of chitin.
-!- SIMILARITY: Belongs to chitinase class II (family 18 of glycosyl
hydrolases).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              MEDITINE=98324849; PubMed=9662472; de la Vega H., Specht C.A., Liu Y., "Chitinases are a multi-gene family

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              PTW: This protein undergoes a protein self splicing that a post-translational excision of the two intervening regi (inteins) followed by peptide ligation.

SIMILARITY: Belongs to the DNA polymerase type-B family.

SIMILARITY: In the intein section; belongs to the homing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              base pairs (bp) on supercoiled DNA with either Mn(2+) or Mg(2+) a cofactor. It cleaves linear DNA only with Mn(2+) and requires a 19-bp minimal recognition sequence. The optimal temperature for activity is 70 degrees Celsius.

FUNCTION: PI-TfuII is a highly active homing endonuclease using Mg(2+) as cofactor. Its minimal recognition and cleavage site is 21 bp long either on linear or circular DNA substrates. Its endonuclease activity is strongly inhibited by the 3' digestion product, which remains bound to the enzyme after the cleavage reaction. The optimal temperature for activity is 70 degrees
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      endonuclease family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CATALYTIC ACTIVITY: N deoxynucleoside triphosphate = N diphosphate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (DNA)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  c -i- FUNCTION: Receptor that may have an important role in cell/ce signaling during nervous system formation.
c -i- SUBCELLULAR LOCATION: Integral membrane protein.
c -i- TISSUE SPECIFICITY: Expressed in the brain. Expressed in cerebrellum, olfactory bulb, cerebral cortex, hippocampus and brain stem.
c -i- SIMILARITY: Belongs to family 2 of G-protein coupled receptor c -i- SIMILARITY: Contains 9 cadherin domains.
c -i- SIMILARITY: Contains 8 EGF-like domains.
c -i- SIMILARITY: Contains 1 laminin EGF-like domains.
c -i- SIMILARITY: Contains 1 laminin EGF-like domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    InterPro; IPR000832;

Novel high molecular weight Dermatophagoides nucleic acid polypeptides used to modify an animals' hypersensitivy to mite allergens.

Claim 3; Page 69; 154pp; English.

Sequences AAY52510-Y52522 represent proteolytic fragments of Dermatophagoides farinae high molecular weight mite allergen protein (HWM nemposition. The HMW-map composition was isolated from a D. farinae homogenate by gel filtration, with each fraction being analysed for the presence of proteins that bound to IgB present in mite-allergic dog antisera. The HMW-map composition comprises mapA (a 109 kD protein) and mapB (98 kD). Mite allergenic proteins and peptides, and nucleic acids encoding them, may be used in therapeutic compositions to modify an animal's hypersensitivity reaction to mite allergens. Animals that may be treated include mammals and birds, especially felines, canines, equines,

humans, other pets, and work or domestic animals. The proteins or fragments may also be used to diagnose allergies via a skin test. The proteins and peptides can also be used to raise antibodies, which have a variety of potential uses. For example, they can be used as vaccines to passively immunise animals against dust mite hypersensitivity, as positive controls in test kits and as tools to recover desired dust mite allergens from a mixture of proteins

XX The invention relates to an isolated mite allergenic protein of CD Dermatophagoides, designated Der HMW-map protein, and its related nucleic acid. The Der HMW-map protein is useful for ellciting an immune response against Der HMW-map protein. The protein or a reagent comprising a non-proteinaceous epitope is useful for identifying an animal (e.g., dog, CC cat) susceptible to or having an allergic response to a mite. An CC therapeutic composition is useful for desensitising a host animal to an allergic response to a mite. The DNA and protein can be used in the CC detection of anti-per HMW-map antibodies in animal fluids, and inhibition of immunoglobulin (19% or Der HMW-map protein activity associated with a CC disease. Antibodies that bind to Der HMW-map are useful for inhibiting CC binding of proteins to 19%, to prevent immunocomplex formation, thus creducing hypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity. Novel high molecular weight Dermatophagoides nucleic acid polypeptides used to modify an animals' hypersensitivy to mite allergens.

Claim Page 125-127; 154pp; English

This sequence represents Dermatophagoides farinae mite allergen protein (map) PDerf98-536, the mature form of PDerf98-555 (AAX52523). PDerf98-536 chas a molecular weight of 98 kD, comprising 536 amino acids, and is a component of the Dermatophagoides farinae high molecular weight mite allergen protein (HWM-map) composition. The HMW-map composition was isolated from a D. farinae homogenate by gel filtration, with each creation being analysed for the presence of proteins that bound to IgE present in mite-allergic dog antisera. Mite allergenic proteins and populations to modify an animal's hypersensitivity reaction to mite compositions to modify an animal's hypersensitivity reaction to mite allergens. Animals that may be treated include mammals and birds, especially felines, canines, equines, humans, other pets, and work or domestic animals. The proteins or fragments may also be used to disgnose allergies via a skin test. The proteins and peptides can also be used to they can be used as vaccines to passively immunise animals as spainst dust mite hypersensitivity, as positive controls in test kits and as tools to crecover desired dust mite allergens from a mixture of proteins

The Der HMW-map protein is useful for eliciting an immune response against Der HMW-map protein. The protein or a reagent comprising a nonprotein account epitope is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. At an iterapeutic composition is useful for desentifying an animal to an therapeutic composition is useful for desentitioning a host animal to an allergic response to a mite. The DNA and protein can be used in the detection of anti-per HMW-map partician activity associated with a disease. Antibodies that bind to Der HMW-map are useful for inhibiting binding of proteins to IgE, to prevent immunocomplex formation, thus reducing hypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity. Sequences AAU96314-AAU96342 or represent Der HMW-map polypeptides of the invention
                                                                                                                                                                                                      Query Match

                                                                                                                                                                CC (map) PDerf98-55. PDerf98-55 has a molecular weight of 98 kD.
CC comprising 555 amino acids, and is a component of the Dermatophagoides
CC composition. The HMW-map composition was isolated from a D. farinae
CC composition. The HMW-map composition was isolated from a D. farinae
CC composition. The HMW-map composition was isolated from a D. farinae
CC composition. The HMW-map composition was isolated from a D. farinae
CC composition. The HMW-map composition was isolated from a D. farinae
CC composition. The HMW-map composition was isolated from a D. farinae
CC composition. The HMW-map composition being analysed for the
CC presence of proteins that bound to 19% present in mitte-allergic dog
CC composition was be used in therapeutic compositions to modify an
CC canimal's hypersensitivity reaction to mite allergens. Animals that may be
CC treated include mammals and birds, especially felines, canines, equines,
CC thumans, other pets, and work or domestic animals. The proteins or
CC that the control of petiles can also be used to raise antibodies, which have a
CC variety of potential uses. For example, they can be used as vaccines to
CC passively immunise animals against dust mite hypersensitivity, as
CC positive controls in test kits and as tools to recover desired dust mite
CC allergens from a mixture of proteins

                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an isolated mite allergenic protein of CD Dermatophagoides, designated Der HMW-map protein, and its related nucleic acid. The Der HMW-map protein is useful for eliciting an immune response against Der HMW-map protein. The protein or a reagent comprising a non-protein activity and protein an interpretation of protein and ite. A composition is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A composition is useful for desentitising a host animal to an allergic response to a mite. The DNA and protein can be used in the context of anti-Der HMW-map analysististis and inhibition of immunoglobulin (Ig) or Der HMW-map protein activity associated with a context of immunoglobulin (Ig) or Der HMW-map protein activity associated with a context of immunoglobulin (Ig) to provent immunocomplex formation, thus reducing hypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity. Sequences AAU96314-AAU96342 or represent Der HMW-map polypeptides of the invention
                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC Dermatophagoides, dealgraneed Der HMW-map protein, and its related nucleic cc acid. The Der HMW-map protein is useful for eliciting an immune response CC against Der HMW-map protein. The protein or a reagent comprising a non-cc proteinaceous epitope is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A composition is useful for desensitising a host animal to an CC allergic response to a mite. The DNA and protein can be used in the CC detection of anti-Der HMW-map antibodies in animal fluids, and inhibition CC of immunoglobulin (Ig) E or Der HMW-map protein activity associated with a CC disease. Antibodies that bind to Der HMW-map are useful for inhibiting CC binding of proteins to IgE, to prevent immunocomplex formation, thus reducing hypersensitivity responses to mite allergens, and as vaccines CC against mite allergen hypersensitivity. Sequences AAU96314-AAU96342

CC represent Der HMW-map polypeptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence represents Dermatophagoides pteronyssius mite allergen protein (map) PDerp98-490, the mature form of pDerp98-509. PDerp98-490 Chas a molecular weight of 98 kD, comprising 490 amino acids, and has a chigh degree of homology with the D. Farinae mature 98 kD allergen, maps CC (AAY52525). Nucleic acid molecules encoding PDerp98-490 were isolated CC from a D. pteronyssius cDNA library by hybridisation with a probe CC encoding the D. farinae high molecular weight map (HMW-map) composition. CC Mite allergenic proteins and peptides, and nucleic acids encoding them, cc may be used in therapeutic compositions to modify an animal's hypersensitivity reaction to mite allergens. Animals that may be treated include mammals and birds, especially felines, canines, equines, humans, cother pets, and work or domestic animals. The proteins or fragments may cother pets, and work or domestic animals. The proteins and cother pets, and work or domestic animals. The proteins and cother pets, and work or domestic animals which have a variety of cotherital uses. For example, they can be used as vaccines to passively controls in test kits and as tools to recover desired dust mite allergens from a control of composition of the protein from a control of the protein and controls in test kits and as tools to recover desired ust mite allergens from a control of the protein from the protein from a control of the p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

The Der HMW-map protein is useful for eliciting an immune response against Der HMW-map protein. The protein or a reagent comprising a non-protein account epitope is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. At the the transmitter of the transmitter of the transmitter of the transmitter of the DMA and protein can be used in the callergic response to a mite. The DMA and protein can be used in the detection of anti-Der HMW-map antibodies in animal fluids, and inhibition of immunoglobulin (Ig) 3 or Der HMW-map protein activity associated with a disease. Antibodies that bind to Der HMW-map are useful for inhibiting binding of proteins to IgB, to prevent immunocomplex formation, thus reducing hypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity. Sequences AAU96314-AAU96342 represent Der HMW-map polypeptides of the invention
                                                                                                                                                                                                                                                                       Mite allergen protein; map; high molecular weight; HMW-map; allergy; house dust mite; IgE; immunoglobulin E; allergen; mapB; hypersensitivity reaction; therapy; treatment; diagnosis; human; feline; canine; veterinary; antibody; vaccine; immunisation.

PDerp99-509 has a molecular weight of 98 kD, comprising 509 amino acids, and has a high degree of homology with the D. farinae 98 kD allergen, maps (AAY22523). Nucleic acid molecules encoding PDerp98-509 were isolated from a D. pterponyssius cDNA library by PDerp98-509 were isolated from a D. pterponyssius cDNA library by the protein acids encoding the D. farinae high molecular weight C map (HMW-map) composition. Wite allergenic proteins and peptides, and nucleic acids encoding them, may be used in therapeutic compositions to modify an animal's hypersensitivity reaction to mite allergens. Animals that may be treated include mammals and birds, especially felines. Animals craimes, equines, humans, other pets, and work or domestic animals. The proteins and peptides can also be used to raise antibodies, which have a variety of potential uses. For example, they can be used as vaccines to passively immunise animals against dust mite cover desired dust mite allergens from a mixture of proteins. (Updated con 06-AUG-2003 to correct OS field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  RESULT 12
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Dermatophagoides, designated Der HMW-map protein, and its related nucleic control of the Der HMW-map protein is useful for eliciting an immune response control of the Der HMW-map protein. The protein or a reagent comprising a nonce protein accoust epitope is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A composition is useful for identifying an animal to an control of anti-Der HMW-map anti-Doubles in animal funds, and inhibition of anti-Der HMW-map anti-Doubles in animal funds, and inhibition of immunoglobulin (Ig)E or Der HMW-map protein activity associated with a control of immunoglobulin to IgE, to prevent immunocomplex formation, thus control of proteins to IgE, to prevent immunocomplex formation, thus reducing hypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity. The present sequence is that of prawn (Penaeus japonicus) chitinase. This protein can be used in claimed fusion proteins of the invention comprising a translocating moiety and a toxic molety, where the translocating moiety is a plant protein (e.g. a lectin) capable of acting as a carrier to translocate the toxic moiety across the gut wall of a plant pathogen, and the toxic moiety is an arthropod-derived peptide or protein capable of causing deleterious effects on growth, development, reproduction or mortality in pest insects. Suitable arthropod peptides and proteins include allatostatins, chitinase, diuretic hormone and their metabolites and analogues. Polynucleotides encoding the fusion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      disease. Antibodies that bind to bet annouse interpretation, thus binding of proteins to 1gE, to prevent immunocomplex formation, thus reducing hypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity. Sequences AAU96314-AAU96342 represent Der HMW-map polypeptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        acid. The Der HMW-map protein is useful for eliciting an immune response against Der HMW-map protein. The protein or a reagent comprising a non-proteinaceous epitope is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A therapeutic composition is useful for desensitising a host animal to an allergic response to a mite. The DNA and protein can be used in the detection of anti-Der HMW-map antibodies in animal fluids, and inhibition of immunoglobulin (Ig)E or Der HMW-map protein activity associated with a disease. Antibodies that bind to Der HMW-map are useful for inhibiting disease. Antibodies that bind to Der HMW-map are useful for inhibiting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 509
